Assignment 4 - Manage Development

Due Date
Wednesday, February 4, 2015

Score
5

Questions and Directions

This is a team assignment.

Every team should list the user stories, features, and bugs about your project as issues in GitHub Issues (https://guides.github.com/features/issues/).

You are not required to finalize all the issues. However, you should plan and estimate the major things you want to work for your team project.

Make sure you assign the issues to specific team members. Again, you do not have to assign all the issues. However, every team member should have something to do at the moment.

When grading, I will basically check:
- if you have created enough issues based on your project idea in GitHub Issues.
- if every team member has one or more issues being assigned.
